Bacteriological Exam

Number of Coliform Bacteria Per 100 mL (membrane filter): 0

All parameters analyzed are below the Maximum Contamination Levels (MCL's) for potable water and meet the drinking water standards established by the Conn. State Health Department except for iron and odor. The iron content is extremely high and well above the recommended 0.3 mg/L staining level. The manganese content is above the recommended 0.05 mg/L staining guideline. A faint "rusty" type odor was detected. If after regular use of this well these parameters do not lower, treatment would be desirable.
